Ideation Phase
Brainstorm & Idea Prioritization Template

Date	30 September 2026
Team ID	SN-TRANSFORM-01
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

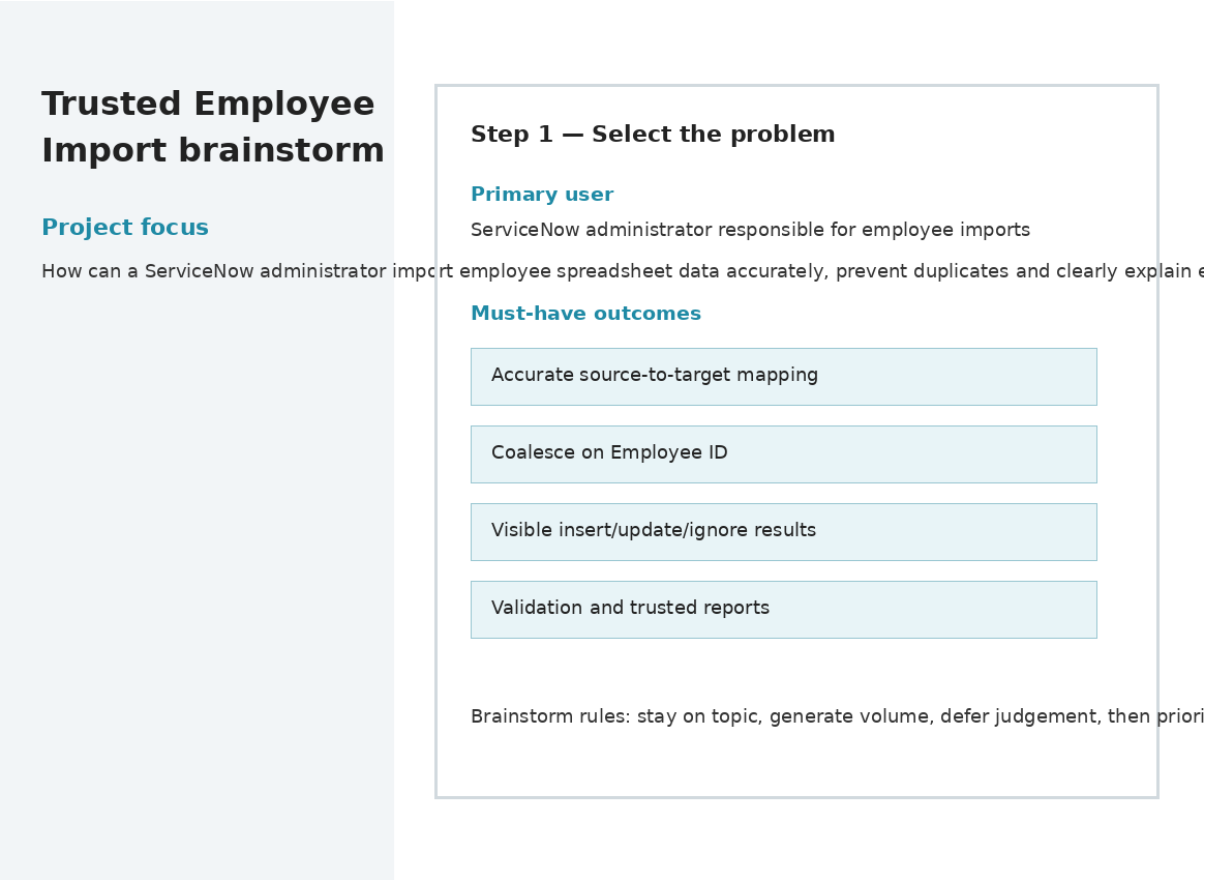

Brainstorm & Idea Prioritization Template:

Use this worksheet to generate practical ideas for a repeatable ServiceNow employee-import workflow, from spreadsheet preparation through validation and dashboard reporting.

Prioritize ideas that protect data integrity, make transform outcomes explainable and remain feasible with Import Sets, Transform Maps and Coalesce.

Step-1: Team Gathering, Collaboration and Select the Problem Statement – Employee Import

Step-2: Brainstorm, Idea Listing and Grouping – Employee Import

2 Brainstorm & group ideas for Employee Import

Write ideas that address accurate, repeatable and duplicate-safe ServiceNow imports.

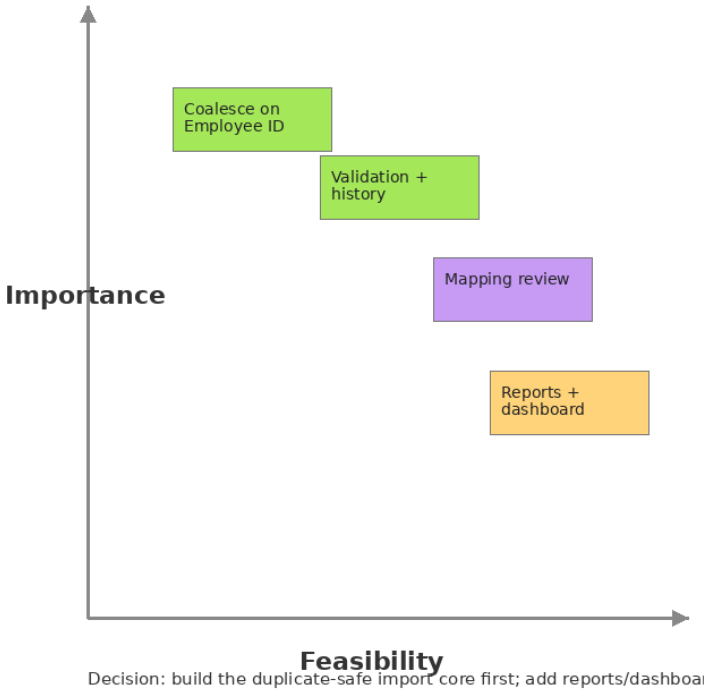

Prepare	Map	Transform	Validate	Report
standard spreadsheet	auto-map review	Coalesce on Employee ID	transform history	department report
required headers	source → target reference	reusable Transform Map	insert/update counts	location report
pre-import checklist	data type check	safe repeat import	sample record check	employee list/dashboard

Project focus: prioritize ideas that improve data integrity first, then add reporting visibility.

Step-3: Idea Prioritization – Employee Import

4 Prioritize Trusted Employee Import ideas

Importance = data integrity and user value; Feasibility = fit with ServiceNow project s

Decision: build the duplicate-safe import core first; add reports/dashboard n

Project Completion Notes

Selected problem statement: A ServiceNow administrator needs to import employee spreadsheet data accurately and repeatedly, while preventing duplicates and clearly explaining inserts, updates, ignored rows and errors.

Idea listing and grouping

Group	Idea	Why it matters
Prepare	Standard spreadsheet template with required headers and a pre-import checklist.	Reduces header mismatch and avoidable load errors.
Map	Auto Map Matching Fields followed by explicit mapping review.	Combines speed with administrator control.
Transform	Set Coalesce = true on Employee ID.	Prevents duplicate employee records and enables updates.
Validate	Review transform history and compare source/target counts.	Makes inserted, updated, ignored and failed rows explainable.
Report	Create department, location and employee list reports.	Turns imported data into usable information.
Monitor	Add the three reports to an Employee Analytics Dashboard.	Provides ongoing visibility for HR and managers.

Idea prioritization

Priority	Selected idea	Score / 5	Decision
1	Coalesce on Employee ID + repeatable Transform Map	4.9	Must-have core
2	Explicit mapping review after auto-map	4.75	Must-have control
3	Validation and transform-history outcome summary	4.65	Must-have evidence
4	Reports and Employee Analytics Dashboard	4.0	Value-adding extension

Selected direction: “Trusted Employee Import” — a guided use of the existing Import Set and Transform Map workflow that makes field mapping, Coalesce, transform outcomes and reporting easy to verify.
