Ideation Phase
Define the Problem Statements

Date	30 September 2026
Team ID	SN-TRANSFORM-01
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Customer Problem Statement Template:

Use the problem-statement structure to describe the ServiceNow administrator's employee-import challenge from the user's point of view.

A clear statement connects spreadsheet loading, field mapping, Coalesce, validation and reporting so the team solves the data-integrity problem rather than only completing a transform.

I am	Project focus	ServiceNow administrator responsible for employee imports
I'm trying to	Project focus	load Excel data into Employee Test accurately
but	Project focus	mapping and duplicate outcomes are unclear
because	Project focus	field maps and validation are not visible together
which makes me feel	Project focus	cautious about data integrity and manual rework

Project visual:

Problem Statement	I am (Custome	I'm trying to	But	Because	Which makes me feel

(PS)	r)				
PS-1	a ServiceNow administrator responsible for employee data imports	load an Excel spreadsheet into the Employee Test table accurately and repeatably	the process is difficult to verify and a repeated file may create duplicate records or unclear outcomes	field mappings, transform results and duplicate-handling rules are not always visible together	cautious about data integrity and frustrated when I cannot quickly explain what happened to each row
PS-2	an HR or data owner who needs reliable employee records	ensure changed employee details update the correct existing record	the same employee can appear in later files with changed values	the import needs a stable matching key and clear insert/update results	uncertain whether the ServiceNow table reflects the latest approved source data
