Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	30 September 2026
Team ID	SN-TRANSFORM-01
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Functional Requirements:

The solution must support a controlled employee-data import from a spreadsheet into ServiceNow, with staging, mapping, transformation, validation, duplicate prevention, reporting, and dashboard visibility.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Spreadsheet Intake	Load Sample Spreadsheet.xlsx through Load Data; select sheet 1 and header row 1.
FR-2	Employee Target Table	Create Employee Test (u_employee_test) with Employee ID, Name, Email, Department and Location string fields.
FR-3	Import Set & Transform Map	Create Employee Import staging table and Sample Spreadsheet Import map to Employee Test.
FR-4	Field Mapping & Transform	Auto-map matching fields, review Mapping Assist, run transform, and show completion state.
FR-5	Coalesce & Validation	Coalesce Employee ID; update existing IDs, insert new IDs, and validate history and target records.
FR-6	Reports & Dashboard	Create department pie, location bar, employee list reports and place all three on Employee Analytics Dashboard.

Non-functional Requirements:

The non-functional requirements keep the import repeatable, secure, traceable, understandable for administrators, and suitable for growing employee datasets.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Administrator can follow the staged import workflow with clear labels and predictable navigation.
NFR-2	Security	Restrict table, import, transform, report and dashboard operations to authorized ServiceNow roles.
NFR-3	Reliability	Import results expose completed, inserted, updated, ignored and error states for auditability.
NFR-4	Performance	Use a staging Import Set and mapped batch transform rather than manual employee entry.
NFR-5	Availability	Use standard ServiceNow tables, transform history and reports so the workflow is centrally accessible.
NFR-6	Scalability	Allow additional spreadsheet rows and future employee attributes without changing the core ID-based match.
