Project Design Phase
Problem – Solution Fit Template

Date	30 September 2026
Team ID	SN-TRANSFORM-01
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

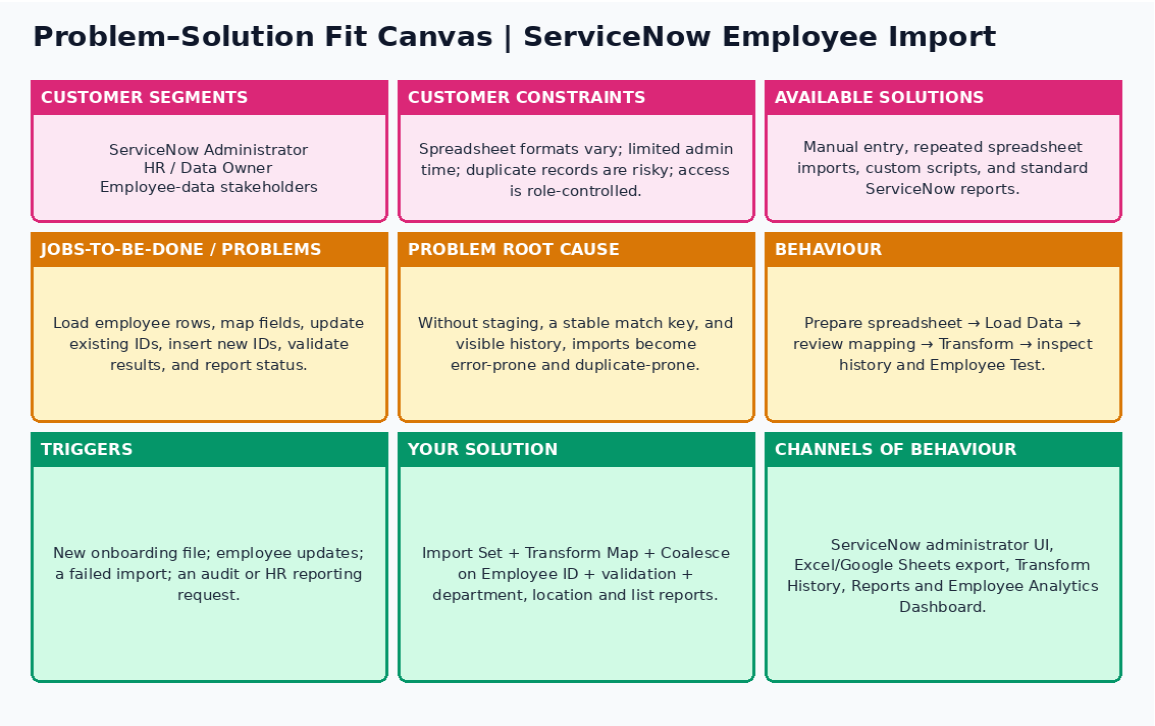

Problem – Solution Fit:

The project fits the needs of ServiceNow administrators and HR data owners who receive employee spreadsheets and must import accurate records quickly, repeatedly and without duplicates.

Purpose:

- ☐ Fit the workflow to the administrator's real job: stage, map, transform, validate and report employee data.
- ☐ Use the existing spreadsheet and ServiceNow UI behavior instead of asking users to adopt a separate data-entry channel.
- ☐ Build trust through Employee ID coalescing, visible transform history and clear inserted / updated / ignored outcomes.
- ☐ Reduce recurring import friction by standardizing the target table, field mapping, reports and dashboard.
- ☐ Improve the current situation for HR and data owners by making employee data quality observable and repeatable.
