Project Design Phase
Proposed Solution Template

Date	30 September 2026
Team ID	SN-TRANSFORM-01
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Proposed Solution:

The project team proposes the following ServiceNow employee-import solution, aligned to the requirements, data flow and architecture already defined for the project.

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	HR and ServiceNow administrators need a reliable way to import employee spreadsheet data, update existing records, insert new employees, prevent duplicates and confirm outcomes without manual record-by-record entry.
2	Idea / Solution description	Configure a ServiceNow Employee Import workflow: load a spreadsheet into Employee Import, transform it into Employee Test through Sample Spreadsheet Import, coalesce on Employee ID, validate history, and surface reports in Employee Analytics Dashboard.
3	Novelty / Uniqueness	The solution combines a simple beginner-friendly Import Set workflow with an explicit Employee ID match key, repeat-import behavior, transform-history checks and operational reporting in one traceable flow.
4	Social Impact / Customer Satisfaction	Reduces HR data-entry effort, improves confidence in employee records, shortens onboarding updates and makes import status visible to administrators and data owners.
5	Business Model (Revenue Model)	For this micro-project, value is operational rather than direct revenue: it demonstrates a reusable ServiceNow configuration pattern that can reduce support effort and improve data quality in enterprise implementations.
6	Scalability of the Solution	The staging and mapping pattern supports larger files, additional employee attributes, recurring imports, role-based access and new reports without changing the Employee ID coalesce principle.
