Project Design Phase
Solution Architecture

Date	30 September 2026
Team ID	SN-TRANSFORM-01
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Solution Architecture:

The proposed architecture bridges the employee-import problem to a controlled ServiceNow solution. It separates file intake, staging, transformation, target storage, duplicate prevention and reporting so each step can be validated.

- Accept employee spreadsheet rows through the ServiceNow Load Data interface.
- Stage raw rows in Employee Import before changing target records.
- Use Sample Spreadsheet Import and Mapping Assist to map fields into Employee Test.
- Coalesce on Employee ID so repeat imports update, insert or ignore records predictably.
- Expose transform history, reports and Employee Analytics Dashboard for operational monitoring.
